

The U.S. is set to spend
\$1,000,000,000,000
over the next 30 years on the
modernization and maintenance of
its nuclear triad

Can the U.S. afford to
simultaneously
upgrade and
maintain all three
legs of the nuclear
triad?

Will rebuilding the
nuclear triad
siphon funding
from conventional
forces?

Why is there no
official cost estimate
for this expensive
plan?
